
Engineering Knowledge. Applied to Industry.

Whitewells Engineering & Consulting Services provides engineering research and development, engineering design and consultancy, with particular expertise in corrosion protection and fit-for-purpose engineering material selection. Established 2011.

CORE CAPABILITIES

- Corrosion engineering
- Protective coatings
- Cathodic protection
- Cathodic delamination
- Materials engineering & selection
- Engineering consultancy
- Applied research & development
- Academia-to-industry technology transfer

APPLICATION ENVIRONMENTS

- Marine & offshore structures
- Oil, gas & pipeline assets
- Land-based industrial plant
- Subsea systems & components

HOW WE WORK

- 01 Understand the engineering condition
- 02 Apply specialist knowledge
- 03 Draw on research where required
- 04 Translate into industrial application

DOCUMENT STATUS

This is an interim capabilities summary issued while the full capability statement, project references and leadership profiles are being finalised for publication. No project references, credentials or registration details are asserted in this document.

WHAT TO INCLUDE IN AN ENQUIRY

- Asset type and operating environment
- Service conditions and exposure
- Existing protection or coating system
- Timescale and project constraints

CONTACT

Official email, telephone and office address are being confirmed and will be published on the website. Until then, please submit enquiries through the website contact form.
